

“ simple solutions to complex communications ...”

Company Profile

Integrate and convert your existing transaction equipment to wireless and digital IP networks through intelligent protocol conversion...

Braintree Communications specialises in the design and development of data communication solutions that allow transaction terminals to seamlessly and immediately connect to modern digital and wireless IP networks using intelligent protocol conversion.

Braintree provides end-to-end expertise in designing, manufacturing and managing OSI layer 1, 2 and 3 devices. Braintree's primary technology focus is on Short Duration Transaction Networks (SDTN) such as EFT applications like Point-Of-Sale and ATM connectivity, defence communications systems, airline reservations networks, security systems and financial services.

Braintree has developed innovative solutions for the telecommunications, defence, airline, banking and finance industries.

Since 1990, Braintree has been committed to the implementation of high-quality, cost-effective remedies combining expertise and experience when designing solutions to meet the most complex of communications problems.

Braintree has designed customised solutions for clients such as Telstra Corporation, Boeing, Ericsson, Cashcard and Japan Airlines.

Our Services Include:

Protocol Conversion using:

- Legacy protocols;
- Synchronous;
- Bisynchronous;
- Asynchronous;
- Bit based protocols;
- Wireless;

.... with software and hardware.

Short Duration Transactions using:

- Payment Transaction servers;
- Alarms, lotteries, EFT and POS;
- Telemetry, energy metering;
- Packet handling, gateways;
- GPRS, CDMA, ISDN, DSL, IP, Dial-up and Leased line.

Specialist Software for the:

- Banking and Finance industry;
- Airline industry;
- Defence communications industry.

Embedded Systems Hardware and Software including:

- Design, Implementation and Manufacture;
- Terminal Adaptors;
- Protocol Conversion Systems.
